

# MOON FOIL PAINTING

Craters on the Moon are caused by asteroids and meteorites colliding with the lunar surface. The Moon's surface is covered with thousands of craters. Unlike the Earth, the Moon has no atmosphere to protect itself from impacting bodies.

## MATERIALS

White Construction Paper  
Black Construction Paper  
Aluminum Foil  
Scissors

Grey, Black, & Silver Paint  
Metallic Sharpies  
Glue Sticks  
Star Stickers

## DIRECTIONS

The goal of this project is to create a piece of artwork that features a cratered moon and a night sky! Instruct campers to crumple up the foil into a ball and use it as their paint applicator. By using different tones of greys and blacks, campers are able to create the look of craters. Once the painting has dried, cut it out, glue onto black construction paper, and fill in the night sky with stars!
